EDUCATION

Georgia Institute of Technology

Expected Dec. 2027

M.S. in Computer Science (Machine Learning) | GPA: 4.00

- **Coursework:** Knowledge Based-AI, Analytics Modeling, Machine Learning, Software Development, Network Science

Texas A&M University

Aug. 2016 – May 2021

B.S & M.S. in Civil Engineering (Structural Engineering)

EXPERIENCE

Software Engineer Co-Op

May 2025 – Feb. 2026

Parkhill

Lubbock, TX

- Saved over \$25,000 in annual software licensing costs by developing custom full-stack web applications using React, MongoDB, and Node.js with version control to replace third-party project management software
- Designed and implemented scalable REST API backend with Node.js, Express, and MongoDB following SDLC best practices and Agile methodology, improving performance and enabling seamless integration with front-end services
- Conducted code reviews and debugged existing C#/.NET code-base, implementing modular extensions to enhance maintainability, streamline cross-functional collaboration, and accelerate future development cycles

Structural Engineer

Jul. 2021 – Present

PROJECTS

AI Generated Stock Market Newsletter | *Next.js, Supabase, PostgreSQL*

- Built a personalized stock news newsletter system by using Next.js (React/TypeScript), Supabase (authentication & database), and Inngeist (scheduled workflows) to achieve automated delivery of customized financial news to users
- Generated AI-powered newsletter summaries by using OpenAI's GPT model (via Inngeist AI) and Marked (markdown parser) to achieve engaging, well-formatted email content from raw news articles
- Fetched and aggregated financial news by using NewsAPI and EmailJS to achieve personalized newsletters delivered directly to users' inboxes based on their selected stock ticker symbols

Job Comparison Android Application | *Java, Android Studio, Android SDK (API 34), SQLite, Git, UML*

- Engineered a single-user Android application using Java and SQLite database persistence to help users compare and rank job offers based on salary, benefits, and location.
- Led the end-to-end design and testing of a mobile solution, creating detailed blueprints and documentation to ensure a high-quality, professional release.
- Partnered with a development team using Git version control to maintain clean code; improved project stability by conducting peer reviews and following standardized app architecture.

Personal Achievement Tracker | *MongoDB, Express.js, React.js, Node.js*

- Developed and deployed a cross-platform full-stack web application with real-time synchronization using MongoDB and Express.js, enabling seamless user experience across desktop and mobile devices
- Implemented secure OAuth 2.0 authentication and authorization by integrating Clerk's enterprise-grade system, ensuring data privacy and user-specific access control without managing sensitive credentials
- Designed a scalable RESTful API architecture with efficient CRUD operations and database indexing, reducing data retrieval time and improving application performance for growing user base

SKILLS

Programming: Python, JavaScript, TypeScript, Java, C#, SQL, R

Frontend/Backend: React, Next.js, Node.js, Express.js

Tools & Databases: Git, Jupyter Notebooks, Android Studio, PostgreSQL, MongoDB

AI/ML: OpenAI API, Prompt Engineering, PyTorch

Languages: English, Spanish, Japanese
